

K SCAN AI

Privacy Policy

Website, iOS App Store, and Google Play submission-ready public version

Effective Date: May 13, 2026 | Last Updated: May 30, 2026 | Contact: kscanai.app@gmail.com

K Scan AI ("K Scan," "we," "our," or "us") respects your privacy. This Privacy Policy explains how we collect, use, disclose, retain, and protect information when you use our website, mobile application, APIs, AI systems, and related services (collectively, the "Service").

K Scan is a fashion-specific visual discovery and shopping-assistance service. The Service allows users to scan fashion items, upload style inspiration, save items, and receive product matches or retailer links. This Policy applies to both the website and the mobile app unless a separate notice says otherwise.

Feature Availability Notice

Some website, investor, beta, or demonstration materials may show planned, conceptual, or future K Scan capabilities. This Privacy Policy describes the data practices of the currently available website and mobile app version unless a feature is expressly described as future functionality.

If K Scan introduces new functionality that materially changes data collection or processing, such as microphone-based voice search, smart-glasses capture, persistent background capture, checkout/payment processing, or on-device privacy filtering, we will update this Policy, update required App Store and Google Play disclosures, and request any required permissions or consent before enabling that functionality.

Privacy Controls Summary

- Your camera is used only when you choose to scan, upload an image, or scan QR/barcode content.
- K Scan is not designed for surveillance, facial recognition, biometric identification, or identifying people.
- K Scan does not generate, store, or retain biometric templates, face geometry, faceprints, or identity profiles.
- During the Beta phase, scan images you submit for scanning are uploaded through encrypted connections to K Scan's cloud processing environment to identify fashion items and return product matches.
- K Scan does not currently apply on-device face blurring or bystander-obscuring before upload.
- Because the current Beta does not remove or blur identifying visual elements before upload, you should avoid submitting images that include faces, bystanders, license plates, private documents, government IDs, financial records, medical information, or other sensitive identifiers unless you intend that content to be processed as part of the submitted image.
- K Scan may use service providers, including cloud hosting, storage, infrastructure, and AI inference providers acting on K Scan's behalf, to process submitted scan images to provide scan results, operate the Service, maintain security, prevent fraud, troubleshoot issues, and improve the Service where permitted.
- K Scan may commercialize aggregated, anonymized, or de-identified insights, and may use certain advertising, attribution, analytics, commerce, and preference data as described in this Policy and permitted by law.
- Optional analytics, advertising, attribution, and tracking technologies are used only where permitted by law and, where required, with consent or App Tracking Transparency permission.
- You may request access, correction, deletion, portability, restriction, or opt-out rights where applicable.
- If you create an account, you may delete your account through the app at Settings > Account > Delete Account.

1. Key Definitions

Personal Information / Personal Data: information that identifies, relates to, describes, can reasonably be linked to, or could reasonably identify an individual or household.

Raw Scan Data: original camera uploads, image files, screenshots, QR/barcode captures, or other unaltered content submitted for scanning.

Submitted Scan Image: an image, screenshot, camera capture, or visual input you submit to K Scan for scan processing, fashion recognition, QR/barcode scanning, product matching, or related visual-search functionality.

Derived Scan Data: metadata or analysis generated from a scan, including garment category, color, texture, style attributes, product-match signals, visual-search embeddings, interaction signals, and related analytical outputs.

Commercial and Preference Data: saved items, product interactions, style preferences, shopping activity, affiliate attribution data, product-interest signals, inferred fashion interests, and commerce-related preferences.

Aggregated Data: information combined with other data so it does not identify a specific person.

Anonymized Data: data that cannot reasonably be used to identify or re-identify a person.

De-identified Data: data processed so it cannot reasonably be linked to an identified person and is subject to controls designed to prevent re-identification.

Aggregated Demand Intelligence: aggregated, anonymized, or de-identified market, product, style, trend, retailer, conversion, scan, and demand insights that do not reasonably identify an individual.

2. Information We Collect

A. Information You Provide

We may collect information you provide directly, including:

- Name, if voluntarily provided
- Email address, including for waitlist signup, beta access, support, account creation, or marketing communications
- Account credentials, where applicable
- Support requests, feedback, communications, and inquiries
- Saved items, shopping preferences, profile settings, and style preferences

B. Social Login and Profile Information

If you sign in through Google, Sign in with Apple, or another authentication provider, we may receive limited profile information permitted by that provider, such as your name, email address, profile identifier, username, or publicly available profile information, depending on your settings and the provider's rules.

We use this information to authenticate users, operate the Service, personalize experiences, support accounts, and comply with legal obligations.

If you use Sign in with Apple, you receive the same account, privacy, deletion, and data-rights protections as users who sign in through any other method.

C. Camera, Scan, Image, QR, Barcode, and Visual Data

When you choose to use K Scan's camera, upload an image, scan a screenshot, or scan QR/barcode content, we may process the image or scan input to identify fashion items, style signals, product identifiers, text, QR/barcode content, URLs, and related product matches.

Camera access is activated only when you intentionally initiate a scan, upload, capture, or QR/barcode action. K Scan does not use the camera for continuous monitoring or background surveillance.

During the Beta phase, every scan image submitted for fashion recognition, product matching, screenshot scanning, image upload, QR/barcode scanning, or related visual search is transmitted through encrypted HTTPS/TLS connections to K Scan's cloud processing environment.

K Scan may use service providers, including cloud hosting, storage, infrastructure, and AI inference providers acting on K Scan's behalf, to process those submitted images to operate the Service, return scan results, maintain security, prevent fraud, troubleshoot issues, and improve scan-result quality where permitted.

K Scan does not currently apply on-device face blurring or bystander-obscuring before transmission.

If your submitted image contains a face, bystander, license plate, private document, or other identifying element, that content may be included in the transmitted image because the current Beta version does not remove, blur, or obscure those elements before upload.

K Scan is designed to analyze garments, accessories, style attributes, product identifiers, QR/barcode content, and product-matching signals, not human faces. K Scan does not use submitted scan images or facial, biometric, depth, or bystander-derived data to identify people, verify identity, create biometric profiles, perform facial recognition, perform targeted advertising based on identity, or build identity profiles.

If a third-party AI, cloud, or plugin API provider receives submitted scan images, that provider may process those images under its agreement with K Scan, its applicable provider terms, this Policy, applicable law, platform rules, and user privacy controls. K Scan will disclose the relevant provider category where required and will obtain any permission required by law or platform rules.

We may add additional privacy-protective image processing features in future versions and will update this Policy if we do.

QR/barcode content may be used to return scan results, support security, diagnose functionality, prevent fraud, and improve the Service. QR/barcode content may be logged only where necessary for diagnostics, fraud prevention, security, or functionality.

D. Photo Library, Media Permissions, Library, and Dressing Rooms

If you choose to upload screenshots, photos, outfit images, mood-board references, shopping screenshots, social-media screenshots, or other images into K Scan features such as Style Library, Dressing Rooms, saved items, style boards, or related private visual-inspiration tools, K Scan may request access to your device's photo library, media library, image picker, or selected media files, depending on your device settings and operating system.

K Scan uses media-library access only when you choose to upload, import, save, or manage an image. K Scan does not use media permissions for background monitoring, continuous media-library scanning, social media scraping, URL importing, link previews, or access to photos or videos that you have not selected or otherwise granted permission to access.

Uploaded inspiration images are private to your account by default. Images uploaded to a Dressing Room may also appear in your Style Library and in the selected Dressing Room's Room Inspiration section. Removing an uploaded image from a Dressing Room may remove only the room link while keeping the underlying Style Library inspiration item. Deleting an uploaded image from your Style Library may remove or hide it from attached Dressing Rooms, subject to the app's deletion and retention practices.

Uploaded inspiration images may be transmitted through encrypted connections to K Scan's private cloud storage and authorized service providers to provide upload, storage, display, signed-URL access, account, Library, Dressing Room, support, security, fraud-prevention, troubleshooting, quality-improvement, backup, and legal-compliance functions.

In the current Beta, uploaded inspiration images are not included in public shared-room previews or public shared-room web pages. K Scan does not allow anonymous users to upload inspiration images.

This upload feature is designed for private inspiration organization. It does not currently perform product matching, shopping search, StyleChat image analysis, automatic face detection, face blurring, or automatic PII removal on uploaded inspiration images unless those capabilities are separately introduced and disclosed in a future update.

If an uploaded screenshot, photo, or saved image contains a face, bystander, license plate, private document, government ID, financial record, medical information, social media handle, username, message, or other sensitive identifier, that content may be included in the uploaded image because the current Beta version does not remove, blur, or obscure identifying visual elements before upload. You should avoid uploading or saving images that include sensitive identifiers unless you intend that content to be stored and processed as part of the submitted image.

K Scan is designed to analyze and organize fashion-related visual inspiration, garments, accessories, style attributes, and product-related context, not human faces. K Scan does not use uploaded media, saved Library images, or Dressing Room inspiration images to identify people, perform facial recognition, verify identity, create biometric profiles, or build identity profiles.

You may manage media permissions through your device settings. If you disable media access, some upload, Style Library, Dressing Room, saved-item, or style-board features may not function, but you may still be able to use other parts of the Service.

E. Sensitive or Special Category Information in Uploaded Visuals

K Scan is not designed to collect sensitive personal information or special category data through scans.

However, uploaded or captured images may incidentally reveal sensitive traits or characteristics, such as health-related appearance, religious attire, disability-related indicators, approximate age, body characteristics, or other personal attributes.

Because scan images are processed in cloud systems during the Beta phase, sensitive visual information may be incidentally transmitted if present in user-submitted images.

K Scan does not intentionally extract, store, monetize, or use this information for identity profiling, eligibility decisions, protected-trait inference, advertising targeting, or demand-intelligence products.

Where applicable law requires explicit consent or enhanced safeguards for processing sensitive or special category data, we will obtain that consent or avoid the processing.

F. Voice and Microphone Data

The initial iOS release of K Scan does not request microphone permission and does not collect voice, microphone, speech-recognition, raw audio, or voiceprint data.

Any voice, speech, wake phrase, or spoken-command functionality shown in marketing, demo, investor, or roadmap materials is not part of the initial iOS release unless microphone permission is requested in the app and the relevant disclosure appears in this Policy, App Store materials, and Google Play materials where applicable.

If K Scan introduces voice search, wake phrases, microphone access, or speech recognition in a future release, we will update this Policy, add the required iOS and Android permission disclosures, and request any required consent before collecting or processing voice or audio data.

G. Automatically Collected Information

We may collect technical and usage information, including:

- Device type, operating system, browser information, and app version
- IP address and approximate location derived from technical data
- App interactions, session data, log data, diagnostics, and performance information
- Device identifiers where used by the applicable app version or SDKs
- Advertising identifiers, such as IDFA, only where permitted by your device settings, applicable law, and Apple's App Tracking Transparency framework
- Marketing engagement data, including email opens, clicks, campaign attribution, referral source information, and app-install attribution data

H. Purchase, Affiliate, and Retailer Interaction Data

K Scan may collect information about product interactions, saved items, outbound retailer clicks, affiliate attribution, referral links, price alerts, product categories, and commerce-related activity.

K Scan does not process payment card information unless paid features are introduced and payment processing is required. If paid digital features are offered through the iOS app, applicable Apple payment rules will be followed.

3. How We Use Information

We may use information to:

- Provide, operate, maintain, secure, and improve the Service
- Process scans and generate fashion-related, commerce-related, or visual-search results
- Personalize product results, recommendations, content, style boards, and user experience
- Save items, maintain scan history, provide price alerts, and support account functionality
- Send welcome emails, beta invitations, product updates, service notifications, support messages, and marketing communications
- Measure advertising, affiliate attribution, campaign performance, and product engagement where permitted
- Analyze usage trends and improve AI systems and product quality where permitted
- Detect fraud, prevent misuse, protect users, and enforce legal terms
- Comply with legal obligations and respond to lawful requests

- Generate derived, aggregated, anonymized, or de-identified business intelligence that does not reasonably identify an individual

Scan image processing is core Service functionality and does not require App Tracking Transparency permission. ATT permission is requested only where required for optional tracking, advertising measurement, attribution, analytics, or partner activities that require permission under Apple's framework.

4. Data Sharing, Commercial Use, and Data Monetization

K Scan's business model may include affiliate commerce, retailer attribution, campaign measurement, analytics, advertising measurement, personalization, commercial insights, aggregated demand intelligence, and aggregated, anonymized, or de-identified insight products.

K Scan may commercialize aggregated, anonymized, or de-identified insights, and may use certain advertising, attribution, analytics, commerce, commercial interaction, and preference data as described in this Policy and permitted by law.

K Scan does not condition core scan functionality on consenting to tracking, sale, or sharing for cross-context advertising. You may decline tracking without losing access to the core scan functionality of the Service.

Except as separately disclosed for a specific program and with any required consent, ATT authorization, or opt-out control, K Scan does not provide raw scan images, uploaded photos, facial or biometric data, or submitted image content to third parties for their independent use.

Raw scans and uploaded images may be processed by K Scan, cloud providers, AI providers, infrastructure vendors, and authorized service providers to operate the Service, generate results, improve scan-result quality where permitted, maintain security, prevent fraud, troubleshoot issues, and comply with law.

These providers may process information only as permitted by their agreements with K Scan, this Policy, applicable law, platform rules, and user privacy controls.

Where an activity constitutes tracking under Apple's App Tracking Transparency framework, K Scan will request ATT permission before engaging in that activity.

Where an activity constitutes sale, sharing, targeted advertising, or similar regulated processing under applicable privacy laws, K Scan will provide required notices, consent mechanisms, opt-out rights, and legally required controls.

K Scan's commercial data practices are designed to preserve the distinction between submitted scan content, user-level operational data, and aggregated, anonymized, or de-identified demand intelligence.

4.1 Protected Data Handling

Protected categories include:

- Biometric identifiers
- Face templates
- Face geometry
- Faceprints
- Facial recognition data
- Government identification
- Payment card information
- Protected sensitive information categories

K Scan does not use scan data to identify individuals, perform facial recognition, verify identity, create biometric profiles, or build identity profiles.

K Scan may use derived, aggregated, anonymized, or de-identified information generated from use of the Service for business, analytics, partner, commerce, advertising, attribution, and demand-intelligence purposes where permitted by law and subject to applicable consent, opt-out rights, platform rules, and user privacy controls.

4.2 Service Providers

K Scan may share information with service providers that perform services on our behalf, such as cloud hosting, infrastructure, storage, AI inference, analytics, email delivery, customer support, security, fraud prevention, performance monitoring, crash reporting, and app operations.

Cloud hosting, infrastructure, storage, and AI inference providers may process submitted scan images to execute scan requests, return scan results, maintain security, troubleshoot functionality, prevent fraud, improve scan-result quality where permitted, or comply with law.

Where third-party AI, cloud, infrastructure, or processing providers process submitted scan images on K Scan's behalf, K Scan uses reasonable configuration, contractual, technical, and organizational measures, where available, designed to limit provider processing to providing the contracted service, maintaining security, troubleshooting, and other permitted processor functions.

K Scan does not authorize service providers to use submitted scan images to identify individuals, build biometric profiles, or create independent user identity profiles.

These providers may process scan content only as permitted by their agreements with K Scan, this Policy, applicable law, platform rules, and user privacy controls.

4.3 Retail, Affiliate, Commerce, and Attribution Partners

K Scan may share limited information with retail, affiliate, commerce, and attribution partners to route users to product results, measure affiliate conversions, confirm referral activity, attribute purchases or clicks, prevent fraud, support campaign reporting, improve product relevance, and support retailer and partner analytics.

This information may include technical referral data, click data, product interaction data, campaign identifiers, transaction attribution data, approximate location, device or browser information, and limited account or identifier data where permitted.

K Scan may provide retail, affiliate, commerce, and attribution partners with commercial interaction data, attribution data, analytics data, preference signals, product-interest signals, derived scan signals, or aggregated and de-identified insights where permitted by law.

K Scan does not use facial recognition data, biometric identifiers, face geometry, or identity profiles for retailer or affiliate partner reporting.

K Scan maintains contractual restrictions designed to prohibit partners from re-identifying de-identified data or using data in ways inconsistent with this Policy and applicable law.

4.4 Advertising, Analytics, and Marketing Partners

K Scan will request App Tracking Transparency permission before any activity that constitutes tracking under Apple's framework.

Subject to applicable law, platform rules, consent, opt-out rights, and ATT permission where required, K Scan may share limited identifiers, usage data, advertising data, attribution data, commercial interaction data, preference data, or inferred fashion-interest data with advertising, analytics, attribution, and marketing partners.

These activities may support campaign measurement, ad performance analysis, partner reporting, referral attribution, fraud prevention, audience measurement, personalization, advertising effectiveness, and marketing optimization.

You may decline tracking without losing access to the core camera-search functionality of the Service, although optional personalization, advertising, attribution, or partner-supported experiences may be affected.

4.5 Aggregated, Anonymized, and De-identified Demand Intelligence

K Scan may create, use, disclose, license, sell, or commercialize aggregated, anonymized, or de-identified data and insights that do not reasonably identify an individual.

These insights may include fashion trend signals, product demand patterns, scan-volume trends, category interest data, style-preference trends, geography-level demand signals at city-level or broader aggregation, retailer performance insights, product-match and conversion analytics, anonymized market research, and aggregated commercial intelligence.

K Scan will use geography-level or category-level reporting only where the combination of geography, fashion category, and other attributes does not reasonably permit re-identification.

Aggregated demand intelligence is generated from derived fashion, product, commerce, and interaction signals. It is not designed to provide facial recognition data, biometric identifiers, or individual user identities, and it does not include raw scan images.

For example, K Scan may provide a retailer or brand with an insight such as: "black cropped leather jackets are trending among users in major urban markets this month." K Scan may provide that retailer with aggregated, de-identified, or derived commercial insights where permitted by law, but this aggregated insight product is not designed to provide facial recognition data, biometric identifiers, or individual user identities.

Aggregated, anonymized, or de-identified data may be retained indefinitely and used for product improvement, market analysis, business reporting, retailer insights, partner analytics, and demand-intelligence products, provided it cannot reasonably identify you.

K Scan maintains technical, organizational, and contractual controls designed to prevent re-identification of de-identified or aggregated demand-intelligence data.

4.6 Commercial and Preference Data

K Scan may use commercial and preference data to personalize the Service, improve product results, generate recommendations, measure affiliate attribution, support commerce routing, support advertising and analytics where permitted, and create privacy-controlled commercial insights.

Commercial and preference data may include saved items, product interactions, scan-result clicks, retailer clicks, style preferences, fashion categories of interest, price-alert activity, search and scan history, affiliate attribution data, product affinity signals, and inferred fashion interests.

Depending on applicable law, jurisdiction, user choices, and the nature of the data processing, some disclosures of this information may be considered sale, sharing, targeted advertising, or similar regulated processing. Where required, K Scan will provide opt-out rights, consent mechanisms, or other legally required controls.

4.7 California Sale / Sharing Notice

Some privacy laws, including California privacy law, define sale and sharing broadly. Certain analytics, advertising, affiliate attribution, campaign measurement, partner reporting, or commercial data activities described in this Policy may be considered a sale or sharing of personal information under those laws.

California residents and residents of jurisdictions with similar opt-out rights may opt out of sale or sharing where required by law through the in-app privacy settings, by visiting <https://kscan.app/do-not-sell-or-share>, through any legally required privacy-control mechanism we make available, or by contacting kscanai.app@gmail.com.

K Scan honors Global Privacy Control signals where required by applicable law.

4.8 User Controls

Depending on your location and the applicable law, you may be able to:

- Opt out of sale or sharing
- Decline App Tracking Transparency permission
- Limit advertising identifiers through device settings
- Opt out of marketing emails
- Request deletion of personal information
- Delete your account in the app via Settings > Account > Delete Account
- Limit optional personalization
- Withdraw consent where processing is based on consent

You may contact us at kscanai.app@gmail.com for privacy requests or questions. You may also use <https://kscan.app/do-not-sell-or-share> for sale, sharing, or similar opt-out requests where applicable.

5. App Tracking Transparency, Cookies, Analytics, Advertising, and Tracking

K Scan may use cookies, pixels, SDKs, device identifiers, attribution tools, analytics platforms, advertising platforms, affiliate tracking technologies, and marketing services to operate the Service, understand usage, measure campaigns, personalize experiences, prevent fraud, support retailer attribution, and support commercial partnerships.

K Scan uses analytics, attribution, and affiliate-measurement tools in a privacy-controlled manner. Some measurement may be limited to first-party analytics or referral reporting and may not constitute tracking under Apple's rules.

Scan image processing is core Service functionality and does not require App Tracking Transparency permission. ATT permission is requested only for optional analytics, advertising measurement, partner attribution, or other tracking activities that require permission under Apple's framework.

If K Scan or any integrated third-party SDK links data from this app with data from other companies' apps, websites, or offline properties for targeted advertising or advertising-measurement purposes, K Scan will first present Apple's App Tracking Transparency prompt and will not enable that activity unless you authorize tracking.

You may allow or deny tracking. Denying tracking will not prevent you from using the core camera-search functionality of the Service, although optional personalization, advertising, attribution, or partner-supported experiences may be affected.

You may also manage tracking and advertising preferences through device settings, app permissions, browser controls, cookie settings, advertising ID controls, App Tracking Transparency settings, Global Privacy Control where required, and legally required opt-out mechanisms.

Where required by law, non-essential analytics, advertising, and marketing cookies or SDKs are used only after valid consent.

We currently do not respond to traditional Do Not Track browser signals. Where required by applicable law, we honor Global Privacy Control signals as opt-out requests for sale or sharing.

6. Third-Party SDKs, Vendors, and Processors

K Scan may use third-party vendors, SDKs, or processors to support app functionality, analytics, crash reporting, cloud processing, authentication, email delivery, affiliate attribution, security, fraud prevention, customer support, marketing, and app operations.

The categories of third-party services may include cloud hosting and infrastructure providers, storage providers, authentication providers, analytics and diagnostics providers, crash reporting and performance monitoring tools, email and customer-support providers, affiliate networks and retailer attribution partners, advertising and campaign-measurement providers, third-party AI or cloud inference providers acting on K Scan's behalf, and payment processors if paid features are introduced.

During the Beta phase, scan images are processed by K Scan and, where used, by cloud-hosted AI, storage, infrastructure, or processing providers acting on K Scan's behalf to generate fashion-recognition and product-matching results.

If a third-party AI, cloud, or plugin API provider receives scan images, that provider may process those images under its agreement with K Scan, its applicable provider terms, this Policy, applicable law, platform rules, and user privacy controls. K Scan will disclose the relevant provider category where required and will obtain any permission required by law or platform rules.

The categories of data collected, whether that data is linked to you, and whether it is used for tracking will depend on the SDKs and data flows included in the applicable app version. K Scan will make required platform privacy disclosures for the applicable app version and will update those disclosures if the SDK mix or data flows change.

K Scan uses reasonable contractual, technical, and organizational measures designed to have service providers and partners handle user data consistently with this Policy and applicable law.

7. Data Retention

We retain information only as long as reasonably necessary for the purposes described in this Policy, unless a longer period is required or permitted by law.

- Account and contact data: retained for the duration of the relationship and for a reasonable period afterward as needed for account support, legal compliance, security, fraud prevention, dispute resolution, or legitimate business records.
- Support and communications data: retained as long as reasonably necessary to resolve the issue, maintain business records, protect the Service, or comply with law.
- Usage, analytics, and marketing data: retained as long as reasonably necessary for analytics, product improvement, marketing, attribution, legal compliance, or business reporting, unless retained in aggregated, anonymized, or de-identified form.
- Raw scan data: retained only as long as reasonably necessary to service the scan request and related security, fraud-prevention, troubleshooting, support, quality-improvement, and legal-compliance needs, and is then deleted or de-identified.

- Library, Dressing Room, saved-item, style-board, and user-uploaded inspiration media: retained while your account is active, while the item remains saved, or until you delete the item or your account, unless retention is required or permitted for security, fraud prevention, troubleshooting, support, quality improvement, backup integrity, legal compliance, or another purpose described in this Policy.
- Saved items, scan history, style boards, and user preferences: retained while your account is active or until you delete them, unless retention is required or permitted by law.
- Aggregated, anonymized, or de-identified data: may be retained indefinitely for research, analytics, commercial insights, product improvement, trend analysis, business reporting, and demand-intelligence products, provided it cannot reasonably identify you.

8. Your Privacy Choices and Requests

Depending on your location, you may request access, correction, deletion, portability, restriction, objection, or withdrawal of consent for certain personal information.

You may opt out of marketing emails using the unsubscribe link or by contacting us at kscanai.app@gmail.com.

You may limit tracking through device settings, app permissions, browser controls, cookie settings, advertising ID controls, App Tracking Transparency settings, Global Privacy Control where required, and legally required opt-out mechanisms.

You may opt out of sale or sharing of personal information where required by law by using the in-app privacy settings, by visiting <https://kscan.app/do-not-sell-or-share>, by using any legally required privacy-control mechanism we make available, or by contacting us at kscanai.app@gmail.com.

Exercising privacy rights will not result in unlawful discrimination or denial of the core Service, although certain optional personalized, advertising-related, or partner-supported experiences may change.

9. Account Deletion

Where K Scan supports account creation, you may delete your K Scan account and associated personal information at any time through the in-app Settings menu under Account > Delete Account.

This option is available regardless of whether you created your account via email, Sign in with Apple, Google Sign-In, or any other supported authentication method.

When you delete your account, K Scan will revoke or disconnect related Sign in with Apple tokens where applicable and handle the account under the same deletion and retention rules that apply to other login methods.

Upon account deletion, your profile, saved items, scan history, preferences, and contact information will be deleted or de-identified within a reasonable period, except where retention is legally required or permitted for security, fraud prevention, legal compliance, dispute resolution, tax, accounting, safety, backup integrity, or other legitimate purposes. The deletion flow is intended to delete the full account record, not merely deactivate the account.

Raw scan data associated with your account will be deleted or de-identified in accordance with our retention practices for raw scan data, unless retained for security, fraud prevention, troubleshooting, support, quality-improvement, or legal-compliance needs.

Aggregated, anonymized, or de-identified data that cannot reasonably be linked back to you may be retained.

You may also contact us at kscanai.app@gmail.com for deletion assistance.

10. Deletion Requests and Downstream Recipients

Where required by applicable law, if we receive and verify a deletion request, we will delete or de-identify covered personal information and notify relevant service providers, contractors, and third parties to whom we disclosed, sold, or shared that information so they can take corresponding action, unless an exception applies or the law does not require further notice.

We may retain information where legally permitted for security, fraud prevention, legal compliance, dispute resolution, accounting, tax, safety, backup integrity, or other allowed purposes.

11. California Privacy Rights

California residents may have rights under the California Consumer Privacy Act and California Privacy Rights Act, including the right to know, access, delete, correct, opt out of sale or sharing, limit use of sensitive personal information where applicable, and avoid discrimination for exercising privacy rights.

K Scan may use, disclose, share, license, sell, or commercialize certain categories of commercial data, preference data, attribution data, analytics data, derived scan signals, and aggregated or de-identified demand intelligence where permitted by law. K Scan will provide required notices, opt-out rights, consent mechanisms, and other legally required controls for activities that constitute sale, sharing, targeted advertising, or similar regulated processing.

Some advertising, analytics, affiliate attribution, or marketing activities may be considered sharing or sale under California law depending on the data flow and the nature of the data processing. Where required, you may opt out by using the in-app privacy settings, using any legally required privacy-control mechanism we make available, visiting <https://kscan.app/do-not-sell-or-share>, or contacting kscanai.app@gmail.com.

Global Privacy Control is honored where required by applicable law. Authorized agents are accepted where legally permitted, subject to verification. We will respond to verified consumer requests within the time required by applicable law.

12. GDPR / UK GDPR Rights and Legal Bases

If you are located in the European Economic Area, United Kingdom, or another jurisdiction with similar rights, you may have the right to access, correct, delete, restrict, object to processing, request portability, withdraw consent, and lodge a complaint with a supervisory authority.

Possible legal bases include contract performance for core service delivery, consent where required for optional analytics, marketing, tracking, cookies, or targeted advertising, legitimate interests for security, fraud prevention, diagnostics, service improvement, commerce routing, and limited affiliate attribution where lawful, and legal obligations for compliance and lawful requests.

Where consent is required, it will be requested separately from acceptance of Terms, presented in a reasonably granular manner, and may be withdrawn at any time. Withdrawal does not affect processing already completed lawfully before withdrawal, but it may reduce optional personalized, marketing, or partner-supported features.

13. International Data Transfers

Your information may be processed in the United States and other countries. Where required, we use appropriate safeguards such as Standard Contractual Clauses approved by the European Commission, the UK International Data Transfer Addendum, or other lawful transfer mechanisms.

14. Security

We implement reasonable administrative, technical, and organizational safeguards designed to protect information, including encryption in transit where appropriate, access controls, secure infrastructure, data minimization, and retention controls.

No system can be guaranteed completely secure.

15. Children's Privacy

The Service is not directed to children under 13 where U.S. federal law applies.

The Service is intended for users aged 13 and older. Users under 13 may not use the Service unless verifiable parental consent is obtained where required by law. Users under the age of majority should use the Service only with permission from a parent or legal guardian where required by applicable law.

We do not knowingly collect personal information from children under 13 without required consent. We do not knowingly sell or share personal information of minors under 16 without required authorization.

If we learn that we collected personal information from a child without required consent, we will take reasonable steps to delete it, unless retention is required or permitted for legal, safety, security, or technical reasons.

16. AI, Recommendations, and Automated Results

K Scan uses cloud-hosted AI and automated systems during the Beta phase to identify fashion items, extract product attributes, generate style signals, rank matches, and personalize experiences where permitted.

AI-generated results may be incomplete, inaccurate, unavailable, or based on similar rather than exact matches. K Scan does not guarantee that any product match, price, availability, retailer listing, style attribute, or recommendation is complete or error-free.

K Scan does not use AI systems to identify people, perform facial recognition, generate biometric profiles, infer protected traits, or make decisions about eligibility for employment, housing, credit, health care, insurance, or other legally significant opportunities.

K Scan does not routinely use human review of submitted scan images. Authorized personnel may access submitted images only when necessary to provide customer support, investigate abuse or security issues, troubleshoot technical problems, maintain security, or comply with law.

17. Third-Party Links and Retailers

The Service may link to third-party retailers, websites, platforms, affiliate partners, or services.

K Scan is not responsible for third-party privacy practices, content, security, pricing, product availability, shipping, returns, payment processing, or policies.

When you leave K Scan and visit a retailer or third-party website, that third party's privacy policy and terms apply.

18. Payments and Paid Features

In the current Beta, purchase-related calls to action are intended to route users to third-party retailer destinations or product pages. K Scan does not complete checkout, process payment cards, or act as the merchant of record for third-party physical goods purchases in the current Beta.

If K Scan introduces paid digital features, subscriptions, premium AI features, scan quotas, or account upgrades in the iOS app, those features will be offered in accordance with Apple's applicable payment rules.

Retailer links for physical goods may route users to third-party retailer websites or apps. K Scan does not process payment card data for purchases completed directly with third-party retailers.

19. Changes to This Policy

We may update this Privacy Policy from time to time.

For material changes that expand how personal information may be used, disclosed, shared, or processed, we will provide additional notice where required and obtain consent or other authorization when applicable.

We will update the Last Updated date above when changes are made.
