

K Scan AI

Privacy Policy

Effective for current Android release posture; contact: kscanai.app@gmail.com

Effective Date: July 7, 2026 | Last Updated: July 8, 2026 | Contact: kscanai.app@gmail.com

K Scan AI ("K Scan," "we," "our," or "us") respects your privacy. This Privacy Policy explains how we collect, use, disclose, retain, and protect information when you use our website, mobile application, APIs, AI systems, StyleChat, Style Library, Dressing Rooms, text and image input features, shopping-assistance tools, and related services (collectively, the "Service").

This copy is aligned to the current Android release posture. It does not claim device-only processing, end-to-end encryption, face blurring, live microphone recording, audio processing, precise location, biometric voice identification, background listening, targeted advertising, or full smart-glasses/XR functionality unless those features are separately implemented and disclosed.

Privacy Controls Summary

- K Scan AI is intended for users 18 years of age and older and is not directed to children or minors.
- Camera, photo-library, media picker, and image upload tools are used only when you choose to scan, upload, save, or manage fashion-related images or visual inspiration.
- The Android release may request approximate/coarse location for optional weather-aware StyleChat. Fine/precise location is not part of the current Android posture.
- Microphone permission is inactive in this Android build frame. K Scan AI does not request RECORD_AUDIO, process audio, listen in the background, record while the app is not in use, use biometric voice identification, or use microphone data for targeted advertising. VoiceScan appears only as a non-interactive Coming Soon feature block where shown.
- Images, screenshots, StyleChat prompts, TextScan inputs, and related text/image context may be processed through secure cloud systems and AI providers such as Google Gemini to provide app functionality. Audio data is not processed in this build frame.
- Dressing Rooms, shared rooms, messages, reactions, and shared content are User Content. The current build includes room-message Report & Hide filtering on the device and an immediate fallback report channel at kscanai.app@gmail.com. K Scan AI does not claim global automated server-side AI censorship sweeps in this build frame.
- K Scan AI does not currently use third-party advertising SDKs or collect Advertising ID for targeted advertising in the current Android release posture.
- You may request account deletion in the app or at <https://kscan.app/legal/delete-account>. Requests are generally processed within 30 days, subject to legal, security, fraud-prevention, backup, dispute, compliance, and technical limits. Text chat histories, profile parameters, and stored images are included in account deletion workflows where technically feasible and legally permitted.

1. Scope and Overview

This Policy applies to the K Scan website, Android app, beta releases, APIs, AI systems, and related services unless a separate privacy notice says otherwise. It covers data collected directly from users, data generated through app use, data processed by service providers, and data disclosed to shopping, retailer, marketplace, AI, diagnostics, infrastructure, and support providers where applicable.

Some website, investor, beta, or demonstration materials may show planned or conceptual capabilities. This Policy describes the currently available Service unless a feature is expressly described as future, optional, or configuration-dependent.

2. Age Eligibility

K Scan AI is intended for users 18 years of age and older. The Service is not directed to children or minors. Users under 18 should not use the Service. K Scan does not knowingly collect personal information from children or minors.

3. Key Definitions

Personal Information / Personal Data: information that identifies, relates to, describes, can reasonably be linked to, or could reasonably identify an individual or household.

User Content: content a user submits, uploads, saves, sends, or shares through the Service, including scan images, uploaded photos, screenshots, TextScan inputs, StyleChat messages, Dressing Room content, notes, captions, shared-room content, messages, reactions, and support communications.

Submitted Visual Data: camera captures, uploaded photos, screenshots, image files, QR/barcode captures, or other visual inputs submitted to K Scan for scanning, StyleChat, fashion recognition, product matching, product search, visual inspiration, Dressing Room organization, or related functionality.

Audio Data: voice, audio, speech input, commands, transcriptions, or related audio metadata. K Scan AI does not collect or process Audio Data in the current Android build frame because microphone access and VoiceScan recording are inactive.

Location Data: approximate/coarse Android location information collected only when you grant permission and use location-enabled features. The current Android release posture does not request fine/precise location.

Derived Data: metadata or analysis generated from use of the Service, including garment category, color, texture, style attributes, product-match signals, image-analysis outputs, search terms, product-interest signals, interaction signals, and related analytical outputs.

4. Information We Collect

A. Account, Authentication, and Contact Information

We may collect name if provided, email address, authentication identifiers, account credentials or authentication-related metadata, support requests, privacy requests, feedback, and account settings. If you sign in through Google or another authentication provider, we may receive limited profile or authentication information permitted by that provider, such as your email address, profile identifier, display name, authentication token metadata, or publicly available profile information depending on provider rules and your settings.

B. Camera, Image, Scan, Screenshot, and Uploaded Visual Data

When you choose to use K Scan AI's camera, upload an image, scan a screenshot, scan QR/barcode content, or submit a fashion-related visual input, we may process that input to identify fashion items, style signals, product identifiers, text, URLs, related product matches, and style or shopping context. Camera access is activated only when you intentionally initiate a scan, capture, upload, or QR/barcode action. K Scan AI does not use the camera for continuous monitoring or background surveillance.

Submitted images may be processed locally and/or through secure cloud systems and AI providers to provide fashion identification, StyleChat, search, matching, product recommendations, product lookup, and related functionality. K Scan AI does not claim that submitted images are processed only on the device, and does not currently claim that faces, bystanders, license plates, or other identifying visual elements are detected, removed, blurred, or filtered before upload.

C. Photo Library, Style Library, and Dressing Rooms

If you choose to upload screenshots, photos, outfit images, mood-board references, shopping screenshots, or other images into K Scan features such as Style Library, Dressing Rooms, saved items, or related visual-inspiration tools, K Scan AI may request access to your device photo library, media library, image picker, or selected media files depending on your device and operating system. K Scan AI uses media access only when you choose to upload, import, save, or manage an image.

D. StyleChat, TextScan, and AI Messages

If you use StyleChat, TextScan, or related AI chat, messaging, or style-assistance features, we may process your messages, prompts, selected image context, saved style preferences, session metadata, scan-derived attributes, and related content needed to provide the feature. AI requests may be processed by Gemini and/or other AI routing or infrastructure providers depending on the current production configuration.

E. Microphone and VoiceScan Coming Soon Posture

Microphone access, VoiceScan recording, wearable voice input, speech commands, transcription, and audio metadata processing are inactive in the current Android build frame. K Scan AI does not request RECORD_AUDIO and does not process audio data for style assistance, accessibility, search, commands, or any other app functionality.

VoiceScan may appear as a non-interactive Coming Soon feature block, but it cannot be used to record or submit audio in this build. The live app uses text and image inputs only. If a future build enables microphone features, K Scan AI will update the app, store disclosures, and this Policy before collecting audio data.

F. Approximate Location Data

If you grant location permission on Android, K Scan AI may collect approximate/coarse location while you use location-enabled features such as weather-aware StyleChat. Location may be used to improve StyleChat context, local fashion relevance, weather-aware styling suggestions, product discovery, retailer relevance, diagnostics, safety, fraud prevention, and app functionality. The current Android release posture does not request fine/precise location and does not use background location tracking.

Location access is optional. You may deny, disable, or change location permissions through device settings. If you deny or disable location access, you may still use K Scan AI, but some StyleChat, local relevance, retailer relevance, or weather-aware styling features may be less tailored or unavailable.

G. Dressing Rooms, Sharing, and UGC

If you use Dressing Rooms, shared rooms, owner controls, messaging, notes, comments, reactions, or similar collaboration features, K Scan AI may process room names, room descriptions, shared content, uploaded images, messages, reactions, participants, timestamps, owner controls, invitation or revocation events, and related metadata to operate those features.

The current build includes a Report & Hide path for room messages that hides reported content locally on the device and provides an immediate fallback report channel at kscanai.app@gmail.com. Hidden content IDs may be stored locally on the device. K Scan AI does not claim global automated server-side AI censorship sweeps, and any server moderation/reporting workflow will be disclosed when it is implemented for users.

H. Shopping, Search, Retailer, Marketplace, and Product Lookup Data

K Scan AI may collect and process search terms, scan-derived product signals, item attributes, product identifiers, retailer identifiers, marketplace identifiers, product URLs, product images, outbound retailer clicks, saved items, product categories, affiliate attribution data, and other shopping or product interaction data. Product, retailer, marketplace, or affiliate links may take you to third-party services governed by their own terms and policies.

I. Device, App, Diagnostics, and Log Data

We may collect device type, operating system, app version, language settings, IP address, app interactions, session events, feature usage, crash logs, performance logs, error logs, security logs, request metadata, fraud-prevention signals, troubleshooting data, user ID, account ID, authentication identifiers, device-level identifiers, or similar information where used by the applicable app version or SDKs.

5. How We Use Information

- Provide, operate, maintain, secure, and improve the Service.
- Authenticate users and support account functionality.
- Process scans, uploaded images, StyleChat prompts, TextScan input, text/image context, approximate location context where enabled, and product signals to generate requested outputs.
- Operate Style Library, Dressing Rooms, saved items, sharing, messages, reactions, and user controls.
- Personalize product results, style suggestions, recommendations, content, style boards, and user experience.
- Route users to retailer, marketplace, product-search, affiliate, or product pages where available.
- Analyze usage trends, diagnose errors, maintain security, prevent abuse or fraud, and comply with legal obligations.
- Process privacy requests, data export/correction requests, account deletion requests, and support communications.

6. AI Processing and Automated Results

K Scan AI uses cloud-hosted AI and automated systems during the current release posture to identify fashion items, extract product attributes, generate style signals, rank matches, power StyleChat, provide style assistance, and personalize experiences where permitted. Depending on the production provider configuration, AI requests may be processed by providers such as Google Gemini and/or other AI routing or infrastructure providers. Audio data is not processed in this build frame.

AI-generated results may be incomplete, inaccurate, unavailable, or based on similar rather than exact matches. K Scan AI does not guarantee that any product match, price, availability, retailer listing, style attribute, StyleChat response, or recommendation is complete or error-free.

7. How We Disclose Information

K Scan AI may disclose information to service providers and third-party processors that perform services on our behalf, such as cloud hosting, infrastructure, storage, database hosting, AI inference, AI routing, analytics, diagnostics, email delivery,

customer support, authentication, security, fraud prevention, performance monitoring, crash reporting, account deletion workflows, location-enabled feature support, and app operations.

K Scan AI may disclose limited information to retail, affiliate, commerce, marketplace, product-search, and attribution providers to route users to product results, return listings, measure affiliate conversions, attribute clicks, prevent fraud, support campaign reporting, and improve product relevance where permitted. When you tap retailer links or third-party links, the third party's privacy policy and terms apply.

8. Analytics, Advertising, Tracking, and Attribution

Based on the current Android release posture, K Scan AI does not currently use third-party advertising SDKs or collect Advertising ID for targeted advertising. K Scan AI does not currently track users across third-party apps and websites for targeted advertising. If K Scan AI introduces tracking, third-party advertising SDKs, cross-app or cross-site advertising measurement, or activities requiring consent, we will update this Policy and required platform disclosures before enabling those activities.

9. Data Retention

We retain information only as long as reasonably necessary for the purposes described in this Policy, unless a longer period is required or permitted by law. Retention periods may vary based on feature use, account status, support needs, security, fraud prevention, troubleshooting, backup integrity, legal compliance, and provider capabilities. Account-linked data that is technically feasible and legally permitted to delete is included in account deletion workflows, including text chat histories, profile parameters, and stored images.

10. Account Deletion and Privacy Requests

You may request account deletion from the in-app Privacy screen or through <https://kscan.app/legal/delete-account>. K Scan AI processes deletion requests through a guarded internal erasure workflow that initiates cascade removal of related account rows and user-owned storage objects. Deletion requests are generally processed within 30 days, subject to legal, security, fraud-prevention, backup, dispute, compliance, and technical retention requirements. K Scan AI may contact you at your account email or at kscanai.app@gmail.com if additional verification or support is needed.

Deletion includes account information, profile data and parameters, saved items, scan history, uploaded images and screenshots, text chat histories, StyleChat content, Dressing Room content, shared-room ownership data, and account-linked preferences where technically feasible and legally permitted, except for information K Scan AI is legally required or permitted to retain. K Scan AI does not retain audio records or microphone metadata in this build frame because audio is not processed.

11. User Choices and Controls

- Camera and photo permissions can be denied or revoked through device settings, but camera/photo features may be unavailable.
- Microphone access is inactive in this Android build frame, so there is no live microphone permission to grant for VoiceScan. If a future build enables microphone features, you will be able to manage permission through Android settings.
- Approximate location permission can be denied or revoked through Android settings. Location-aware StyleChat may be less tailored or unavailable.
- You may use in-app privacy tools where available to request export, correction, or account deletion.
- You may contact kscanai.app@gmail.com for privacy questions or requests.

12. Security

K Scan AI uses reasonable administrative, technical, and organizational measures designed to protect information. No system is completely secure. You should use strong credentials, protect your device, and avoid uploading sensitive non-fashion personal information unless you intend it to be processed for your request.

13. Changes to This Policy

We may update this Policy from time to time. If changes materially affect how we collect, use, disclose, or retain information, we will provide notice where required by law or platform policy. Continued use of the Service after an update means the updated Policy applies, subject to any required consent or choice mechanism.

14. Contact

Questions, privacy requests, deletion support, and report-related contacts may be sent to kscanai.app@gmail.com.
