

K SCAN AI

See It. Say It. Get It.

The Fashion-Specific Conversion Layer For the Visual Era.

A privacy-first, voice-first visual commerce platform that turns any real-world fashion moment into an instant, multi-retailer purchase path — on mobile today, smart glasses tomorrow.

\$850B

Online Fashion Market 2026

Precedence Research 2025

A person sees the perfect outfit on the street. Intent lasts for seconds. Every tool they reach for lets them down.

1

See it

On the street, in a feed, in a screenshot

2

Search it

Type a text description — fails on silhouette & texture

3

Lose it

Inspiration expires in ~5 seconds of friction

4

Forget it

Intent is permanently lost; no purchase, no attribution

K SCAN AI CLOSES THE GAP

See it → Identify it instantly

Fashion-specific AI parses silhouette, texture, colour, and pattern — not general object detection.

Match it cross-retailer

20+ retailer APIs. Neutral routing. The best match, the right price, regardless of where inventory lives.

Buy it in < 5 seconds

Voice-trigger to ranked purchase result in under 5 seconds. Intent captured before it expires.

Privacy by architecture

Faces blurred on-device before any upload. No biometric data. GDPR/CCPA compliant by design.

Three macro waves have converged in 2026 — the window is open now.

01

AI Vision Is Mainstream

25B+

Monthly Google Lens Queries

Google / Debbie Weinstein, OMR 2025

Google Lens now handles over 25 billion queries per month — 1 in 4 with commercial intent. Vision AI accuracy is at human parity for fashion attributes. The enabling stack exists at commercial infrastructure cost today.

02

Social Became the Discovery Engine

76%

Gen Z discover products via social

Salesforce Connected Shoppers Report 2025

53% of all shoppers and 76% of Gen Z now discover products on social platforms. The discovery channel shifted permanently. The commerce layer has not caught up — that is K Scan's market.

03

Smart Glasses Left the Lab

7M+

AI glasses sold in FY2025

EssilorLuxottica Q4 2025 / FY Results, Feb 2026

EssilorLuxottica reported over 7 million AI-glasses units sold in FY2025. Consumer wearables are no longer slideware — they are shipping hardware. K Scan is building the commerce layer before the installed base is locked in.

TAM — Total Addressable Market

\$5.5T

Global B2C Ecommerce by 2027

U.S. ITA eCommerce Sales Forecast, accessed 2026

The broadest market that visual commerce behavior can address — all consumers trained on image-led and social-led discovery.

SAM — Serviceable Addressable Market

\$850B

Online Apparel & Fashion Market 2026

Precedence Research, Dec 2025

English-speaking and Western European fashion ecommerce reachable via affiliate, creator-led distribution, and direct retailer API.

SOM — Serviceable Obtainable Market

\$25M ARR

K Scan 3-Year Revenue Target

Company projection (management estimate)

Creator-led streetwear and occasionwear wedge, growing to retailer analytics and wearables layer. Year 3 run-rate target.

<0.5s

TOTAL END-TO-END: ≤ 5.0 SECONDS · p95 TARGET: < 4.3s · Management performance target

Voice Pipeline

Full command suite: find, refine, cheaper alt, save, share — hands-free mode for glasses

Style Board

Persistent saved looks, price alerts, creator collections, shareable scan cards

Smart Glasses Mode

BLE abstraction SDK: Ray-Ban Meta, Vuzix, + future platforms — phone processes, audio results

Creator Ecosystem

FTC-compliant attribution, creator storefronts, affiliate tracking — organic acquisition engine

PLATFORM INDEPENDENCE MATRIX

Feature	K Scan AI	Google Lens	Amazon Lens	Pinterest
Fashion-specific ranking	✓	✗	✗	~
Cross-retailer neutrality	✓	✗	✗	✗
Voice-first query layer	✓	~	✗	✗
Privacy-on-device blur	✓	✗	✗	✗
Wearable abstraction SDK	✓	✗	~	✗
Creator attribution built-in	✓	✗	✗	~

COMPETITIVE RESPONSE TIMELINE (Management Estimate)

Pinterest

6–9 mo

Discovery-native; lacks commerce stack depth

Google

6–12 mo

Big distribution; needs fashion-specific routing

Amazon

9–15 mo

Retail bias makes neutral routing harder

Meta/IG

12–18 mo

Glasses-first; closed inventory alignment slower

Competitive features from public documentation (Q1 2026). Response timing is K Scan management estimate, not a third-party forecast.

01

Data Flywheel

Every scan, save, click, and purchase updates Style-Parse. The corpus grows daily. 2M+ labelled scans projected by Month 18. Moat compounds before any copycat is funded, staffed, and launched.

KEY METRIC:

2M+ labelled scans by M18

02

Intent Capture Layer

K Scan captures the highest-value moment in commerce — the instant a consumer sees something they want, in the real world. No other platform owns this moment. Intent captured before it expires.

KEY METRIC:

5-second capture window vs. hours for text search

03

Inventory Routing Engine

Multi-retailer routing simultaneously maximises match quality and commission yield. User sees the best result; platform earns optimally. Incentives aligned. Patent-pending algorithm.

KEY METRIC:

20+ retailer APIs · commission-optimised routing

04

Wearable Abstraction SDK

Single BLE abstraction SDK supports Ray-Ban Meta, Vuzix, and all future smart glasses. K Scan is not building for one hardware partner — it is building the category-defining wearable commerce infrastructure.

KEY METRIC:

Hardware-agnostic · Rokid, Vuzix validated as backups

Hardware abstraction also validated on Rokid Max 2 and Vuzix as secondary channels to mitigate single-platform SDK dependency risk.

THE ZERO-KNOWLEDGE DATA PIPELINE

SELLABLE ANONYMIZED DATA PRODUCTS (B2B SAAS REVENUE LAYER)

DILIGENCEABLE NOW

✓ Style-Parse prototype: top-3 match quality tested on representative SKU set

✓ Latency benchmark: scan-to-result < 5s on consumer hardware

✓ Privacy architecture: on-device face blur operational

✓ Retailer handoff flow: affiliate link generation tested with 3 retailer APIs

✓ MVP architecture fully defined and scoped for seed build

✓ Voice pipeline: wake phrase and command suite prototyped

M6 — Beta Launch	M12 — Public Launch	M18 — Series A Ready
→ 2K beta users onboarded	→ 100K MAU target	→ 150K MAU
→ Top-3 match quality >70%	→ 50 creator partners live	→ \$1M+ ARR
→ BLE glasses POC path scoped	→ 2 retailer API deals signed	→ D30 retention >28%
		→ CAC:LTV >1:3 proven

---	---	--	---

Affiliate Commissions

55–72%

Revenue Mix Target · Launch

5–15% take rate on referred GMV. Fast to launch with affiliate networks. No inventory or transaction risk. Validates demand before building the data layer.

K Scan Pro

20–28%

Revenue Mix Target · M6+

\$9.99/month. Unlimited scans, AI stylist, price alerts, glasses mode. Heavy users pay; casual users drive data. Margin expansion driver.

B2B Data Insights

8–12%

Revenue Mix Target · M12+

Aggregated trend intelligence, failed-match reports, conversion data. Sold to brands, retailers, and agencies. 80%+ gross margin product.

Sponsored Placements

0–5%

Revenue Mix Target · Post-PMF

Sponsored visibility with hard relevance controls and full disclosure. Not a launch dependency. Added only after organic trust is established.

UNIT ECONOMICS (MANAGEMENT PROJECTIONS)

Metric	Target Value	Basis / Note
Target ARPU (annual)	\$9.74	Based on affiliate + Pro subscription mix — Company estimate
Blended CAC	~\$6	After creator loop develops — Company estimate
CAC Payback	< 8 mo	Once D30 retention stabilises — Company target
Gross Margin (scale)	65–70%	As Pro + data mix rises — Company target
Affiliate take rate	5–15%	Consistent with Farfetch (up to 10%), ASOS (5–10%) published programs
Inference cost/1K scans	\$4–\$8	AWS/GCP 2025 pricing + optimized inference — Company estimate

All unit economics are K Scan management projections. Affiliate benchmarks from publicly stated Farfetch and ASOS affiliate program guidelines. All figures are estimates for investor discussion.

INVESTOR KEY METRICS DASHBOARD

These are the metrics management commits to. Investors should diligence the business against these targets at M6, M12, and M18.

>28%

D30 Retention Target

Distinguishes utility from novelty — the single most important early signal

>1:3

CAC : LTV Goal

Creator loop must produce this ratio before paid UA is activated

65–70%

Gross Margin at Scale

Pro + data mix rising over affiliate creates durable margin expansion

>20%

Scan-to-Click Conversion

High-intent fashion scan with good match quality should drive >20% CTR

<4.3s

p95 Latency Target

>70%

Top-3 Match Quality

50+

Creator Partners by Beta

2

Retailer API Deals by M18

\$1M+

ARR by M18

150K

MAU by M18 (Series A)

KILL CRITERIA (INVESTOR-PROTECTED GUARDRAILS)

- ⚠ Match precision < 60% by M6
- ⚠ CAC : LTV < 1:3 at M12
- ⚠ Latency > 5s p95 at scale

ADDITIONAL TRACKING: Median days between first and second scan session (utility vs. novelty indicator) · Creator-driven install % vs. organic install % (creator ROI signal)

All metrics are K Scan management targets. No third-party forecasts are asserted on this slide.

ALL NUMBERS BELOW ARE K SCAN MANAGEMENT PROJECTIONS — NOT THIRD-PARTY FORECASTS

Year	MAU	Revenue	Gross Margin	Net Burn	Revenue Mix
2026E	25K	\$0.2M	52%	(\$2.1M)	~90% Affiliate
2027E	100K	\$1.2M	58%	(\$1.4M)	70% Aff. / 25% Pro
2028E	220K	\$5.0M	67%	(\$0.2M)	55% Aff. / 30% Pro / 15% Data

All projections are management estimates for investor discussion. Gross margin, burn, and mix assumptions are planning targets, not guaranteed outcomes.

GTM CHANNELS

Share-Sheet & Screenshot Ingest iOS share extension + Android share target. Zero CAC. Users already do this — K Scan becomes the default destination for saved outfit screenshots.	Day 1
Creator Pilot Network 50–200 fashion micro-creators (50K–500K followers). Gifting + affiliate arrangements drive thousands of app downloads at near-zero cash spend. Affiliate tech stack ensures last-click attribution — preventing commission leak to TikTok Shop or Instagram.	M1–3
Streetwear & Trend Communities Reddit fashion subs (8M+ combined members), Discord servers, StockX-adjacent communities. Exactness-obsessed early adopters = highest repeat-scan use case. Vocal evangelists if the product delivers.	M1–6
Performance Marketing Paid only after CAC:LTV ratio proven. 10+ retailer coalition target. Paid media amplifies the loop; it is not the engine.	M10+ (CAC-gated)

18-MONTH ROADMAP

M0–3	M4–6	M7–9	M10–12	M13–18

\$420K	\$380K	\$380K	\$520K	\$550K

Founder / CEO

Product · Strategy · Vision

Consumer tech product leadership. Deep knowledge of visual AI and fashion commerce markets. Series A experienced operator.

Lead AI Engineer

Vision AI · ML · Embeddings

Computer vision specialist. Fashion attribute recognition research background. ViT fine-tuning and vector DB architecture.

Sr. iOS Engineer

Swift · ARKit · CoreML

ARKit + CoreML native integration expert. App Store launch experience. Camera pipeline and on-device inference.

Android Engineer

Kotlin · ARCore · TFLite

ARCore and TensorFlow Lite specialist. Real-time camera processing at mobile hardware constraints.

Backend Lead

AWS · Pinecone · APIs

Distributed systems and ML inference infrastructure. Affiliate API integration and vector search at scale.

Wearables Engineer

BLE · Meta SDK · Vuzix

Hardware abstraction layer specialist. BLE 5.x, Wi-Fi Direct, smart glasses SDK integration.

ADVISORS:

Fashion Industry Veteran (e-comm + licensing) · Wearables / Hardware BD Executive · AI Commerce Research Lead · Privacy & Compliance Counsel (GDPR/CCPA)

The company sits at the intersection of AI, fashion commerce, mobile UX, and hardware. Every hire is chosen to unlock exactly those bottlenecks — not to emulate a large enterprise org chart too early.

Build for Path B independence. Structure for Path A optionality. There is no cost to maintaining both, and significant strategic value.

PATH A — STRATEGIC ACQUISITION

18–36 Months · \$200M – \$500M

Basis: \$25M ARR × 8–15× visual commerce acquisition comps

Google / Alphabet

8–12× ARR

Fashion search specificity + glasses ecosystem expansion

Meta / Instagram

10–15× ARR

Instagram Shopping + Ray-Ban Meta OS commerce layer

Amazon

8–12× ARR

Defensive visual search expansion + DTC inventory neutral

LVMH / Farfetch

12–18× ARR

Own the luxury discovery + intent data channel globally

Shopify

8–10× ARR

In-the-wild scanning → Shop Minis ecosystem integration

PATH B — SERIES A → IPO / PREMIUM ACQUISITION

5–7 Years · \$800M – \$2B

Public market: SaaS + commerce hybrid · 8–20× ARR at scale

Series A (M18–24)

\$8–15M

150K MAU + \$1M ARR

Series B (M30–42)

\$30–50M

3M MAU + \$25M ARR

IPO / Premium Acq.

\$800M–\$2B

10M+ MAU · \$100M+ ARR · category leader

R&D / Engineering — \$1.17M (52%)

- Lead AI Engineer: \$265K
- Sr. Mobile Engineers: \$370K combined
- Backend Lead: \$185K
- Wearables Engineer: \$165K
- UI/UX: \$150K
- GPU training: \$85K

GTM / Growth — \$575K (23%)

- Influencer seeding: \$200K (Phases 1–2)
- Performance marketing: \$217.5K (CAC-gated)
- PR + events + community: \$100K + \$57.5K

Cloud / AI Infra — \$375K (15%)

- Inference + AWS hosting: \$252K/yr @ 150K MAU
- Pinecone vector DB: \$42K/yr
- CDN + monitoring: \$81K/yr

Legal / Admin — \$250K (10%)

- IP protection + entity: \$60K
- Privacy compliance (GDPR/CCPA): \$60K
- Accounting + insurance + contingency: \$130K

KILL CRITERIA: Match precision < 60% by M6 · CAC:LTV < 1:3 at M12 · Latency > 5s p95 at scale (Fund deployment halts if any criterion triggered)

Allocation is a management planning estimate. Individual line items may shift based on milestone outcomes.

THE ASK

\$2.5M Seed Round

18 months of runway to reach the Series A evidence package:

- Launch MVP: fashion AI + voice pipeline + 10+ retailer connections
- Prove the creator loop: 50–200 partners, measurable scan → share → install motion
- Ship glasses POC by Month 9; commercial wearable path by Month 18
- Reach 150K MAU, \$1M+ ARR, and two signed retailer API deals
- D30 retention > 28% — proving utility, not novelty

The point-and-shop era has arrived.

K Scan AI — See It. Say It. Get It.
